

## Technical Datasheet

# HM...F

Turbine Flow Meters  
with Flange Connections

## Description

Turbine flow meters serve to accurate measurement of continuous and discontinuous flow rate values. This turbine flow meter is most suited for liquids with low and middle viscosity, such as for example water, emulsions, mixtures containing glycol and light oils. The large range of different pipe connections and structural sizes allows using these flow meters in various applications and in various industrial sectors

## Principle and Design

The turbine flow meters KEM are indirect volume counters built on the principle of using the counter with the Woltmann turbine impeller. The energy coming from the flow of the liquid sets in motion a centrally and rotatably mounted rotor. The number of the rotor revolutions is directly proportional to the volumetric liquid flow. The speed of rotation of the turbine rotor is contactlessly sensed through the wall of the flowmeter body. The impulses generated by each turbine blade correspond to a certain accurate volumetric flow of the measured medium.

The number of pulses for a certain period of time corresponds to the value of the medium flow rate expressed, for example, in litres per minute. The lightweight turbine wheel allows quick response to changes in the value of the medium flow rate (< 50 m/s)

## Applications

- Tap and demineralised water
- Fuels
- Liquefied gases
- Pharmaceutical liquids
- Fuel oil
- Solvents

## Features

- Short response time (> 50 ms)
- Dynamic measuring system
- Temperature: -196°C to +350°C
- Several nominal sizes
- Pressure up to PN 400 / 6.000 PSI
- DIN- and ASME flanges available as standard (further flanges on request)
- Robust carbide bearings

## Technical Data

Metric flanges as per DIN-EN 1092-1 Form B

- 1) The data on K-factors and maximum frequencies are average values at 1mm<sup>2</sup>/s. The numbers of pulses and frequencies at higher viscosities may vary. Exact values can be found in individual calibration records.  
 2) See drawing (page 6)

## General

Linearity	± 1% of actual flow (≤ 1 mm <sup>2</sup> /s; up to 0.1% with linearization electronic)
Repeatability	± 0.1 %
Measuring Range	Standard: 1:10 Extended : on request
Viscosity Range	0,8 to 100 mm <sup>2</sup> /s
Materials	Housing: as per DIN 1.4404 (SS316 L) Wheels: as per DIN 1.4122 / 1.4460 (SS329) Bearing: Carbide
Medium temperature	-196°C to +350°C (higher temperatures on request)
Dimensions	See drawing (page 6)
